## How can I export our SDS library to a Excel/xlsx/csv file?

Under the "Reports" menu (Require PRO version to access), you can find an option to export all your SDS to a csv file.

On the [All Our SDS](#) page you can export a selection of SDS to Excel file. In the below example we export all SDS that are flammable or explosive (GHS01 or GHS02 pictogram) with recorded stored amount of more than 100 gallons that can be useful for EPA reporting.

The screenshot shows the 'All Our SDS' page with various filters and a table of SDS entries. The 'Export to XLSX' button is highlighted in red. The filters include 'GHS pictograms' set to 'GHS02', 'Amount stored more than' set to '100 (gals)', and 'External System Id Presence' set to 'All'. The table lists two SDS entries: 'Pentane Blend 85/15' and 'Petrol K4'. The table has columns for Product Name, Supplier Name, Product Code, Revision date, GHS, Substance hazard, Last evaluated, Locations, and Approval Status.

Product Name	Supplier Name	Product Code	Revision date	GHS	Substance hazard	Last evaluated	Locations	Approval Status
Pentane Blend 85/15	Shell Chemicals Europe BV	Q1128	2022-03-28		H3 S4 E4	Risk must be evaluated	View locations	No approval info
Petrol K4	PANTA DISTRIBUZIONE S.p.A		2012-11-30		H3 S4 E4	Risk must be evaluated	View locations	No approval info

See below of an example file of what data is available in the export file. (Other data can be added to the export file on request).
