

User management and access controll

Restrict QR Code posters to devices on your corporate network (IP restriction)

If you only want devices on your corporate network to access your SDS library, you can restrict access to QR code posters/users by IPs or IP ranges.

The screenshot displays the 'Login QR Code' interface with the instruction 'Please choose a print layout'. Two QR code posters are shown: one for 'Scan QR code to access SDS Library' and another for 'SCAN TO ACCESS SAFETY DATA SHEETS'. A 'Set IP Restriction' dialog box is overlaid, featuring a text input field for 'Allowed IPs' (highlighted with a red box), a green 'ENABLE IP RESTRICTION' button, and a blue 'Save' button. Below the dialog, a list of actions is visible: 'Print QR code for login', 'Copy URL to clipboard', 'Email access link to your team', 'Set IP Restriction' (highlighted with a red box and a red arrow), and 'Disable QR code login'. A note states: '*You can use the URL of the QR code to add a link to the SDS library on your Intranet.'

This function requires a separate subscription to be activated.
