

Why and how to maintain a library of SDSs?

What is a MSDS-Binder

What used to be named MSDS-Binder is now typically named SDS-Binder because the term MSDS has been replaced by the term SDS. An MSDS-Binder is a printout of all safety data sheets for a location in your company. Before Safety data sheets went online, an SDS-Binder was the way to organize safety data sheets. Now it is a bit outdated, but in SDS Manager it is still possible to print out your SDS library in SDS-Binder format.
