

Why choose SDS Manager

Does SDS Manager have iOS and Android APP?

For a very good reason, SDS Manager do not require an APP installed to access the SDS library.

We strongly discourage our customers to rely on installed APPs, which require passwords for login to give access to safety information, as it is unrealistic to expect all employees to have an updated SDS APP always installed on their phones.

You do not want your employees to be installing APPs and look for passwords when an accident has occurred.

Using QR codes to access your SDS library gives a much better safety profile.
