Can I set an alternative Emergency contact information for our organization?

By default, SDS Manager will show your country's emergency contact number in the system and on labels. Please confirm that it shows correctly for your country.

You can set a custom Emergency contact information for cases where your organization has a dedicated number you want your employees to call in case of emergency.

Go to 'Settings', fill out the information (Name + Phone number) and click 'Save settings'.

The screenshot displays the 'Settings' page in the SDS Manager application. The main content area is titled 'Settings' and includes several toggle switches for 'SDS Approval functionality', 'Measurement system', and 'Show chemical tracking QR code on labels'. Below these, a section titled 'Custom emergency agency' is highlighted with a red border. This section contains a descriptive text, two input fields labeled 'Emergency agency' and 'Phone', and a 'Save settings' button. To the right, a sidebar menu is visible, listing various settings options: 'Manage account', 'Organization profile', 'User management', 'Subscription', 'English', 'Invite members', 'Settings' (highlighted with a red box), and 'Logout'. The top of the sidebar shows the user profile for 'Company X' with a 'Test CC' button.
