How can i create a Safety Information summary of an SDS?

SDS Manager can automatically create Safety information Summary with information from the SDS that is most relevant for the users of the chemical.

The Safety Information summary is created as shown below.

The screenshot displays the SDS Manager interface with the following components:

- Columns:**
 - Pictograms & Controls:** Displays hazard pictograms and control icons.
 - Substance hazard:** Contains sub-columns for Hazard (H), Safety (S), and Environmental (E) information, represented by colored boxes with codes (e.g., H2, S4, E1).
 - Actions:** Contains icons for various actions like PDF, Log, and a vertical ellipsis menu.
- Menu:** A dropdown menu is open from the ellipsis icon, listing actions: Move SDS, Log presence of product, Create risk evaluation, Move to archive, Hide from Non-admin, **Safety information summary** (highlighted), Replace with new SDS, Edit SDS information, Add EAN code, and Add attachment.

The information in the summary does not have the same order as the SDS. That is intentional. the information most likely to be needed by a user of the chemical is presented first.

See below example of a Safety Information summary generated from SDS Manager
